Type of Posting	Revision Bulletin
Posting Date	27–Jul–2018
Official Date	01–Aug–2018
Expert Committee	Chemical Medicines Monographs 6
Reason for Revision	Compliance

In accordance with the Rules and Procedures of the 2015–2020 Council of Experts, the Chemical Medicines Monographs 6 Expert Committee has corrected two errors in the Fexofenadine Hydrochloride and Pseudoephedrine Hydrochloride Extended-Release Tablets Revision Bulletin originally posted on June 29, 2018, with an official date of July 1, 2018.

In *Dissolution Test* 7, the specifications in *Times* for *Pseudoephedrine hydrochloride* have been corrected to read “45 min; 3, 5, and 12 h”, which now matches the times in *Table 8*. Because of a transcription error, the *Times* for *Pseudoephedrine hydrochloride* had been indicated as “45 min; 2, 4, and 12 h”.

In addition, the amount of methanol in *Standard stock solution A* has been corrected from “NMT 0.5%” to “NMT 5%”.

DEFINITION

Fexofenadine Hydrochloride and Pseudoephedrine Hydrochloride Extended-Release Tablets contain NLT 93.0% and NMT 107.0% of the labeled amounts of fexofenadine hydrochloride ($C_{32}H_{39}NO_4 \cdot HCl$) and pseudoephedrine hydrochloride ($C_{10}H_{15}NO \cdot HCl$).

IDENTIFICATION

- **A.** The retention times of the major peaks of the *Sample solution* correspond to those of the *Standard solution*, as obtained in the *Assay*.
- **B. THIN-LAYER CHROMATOGRAPHIC IDENTIFICATION TEST** ⟨201⟩

Standard solution A: 6 mg/mL of USP Fexofenadine Hydrochloride RS in methanol

Standard solution B: 12 mg/mL of USP Pseudoephedrine Hydrochloride RS in methanol

Sample solution: Transfer the equivalent of 30 mg of fexofenadine hydrochloride and 60 mg of pseudoephedrine hydrochloride from finely powdered Tablets (NLT 4) into a suitable vessel, and add 5 mL of methanol. Cap the vessel, and shake vigorously for 2 min. Pass the resulting suspension through a suitable filter of 0.45-µm pore size. Use the filtrate.

Adsorbent: 0.2-mm layer of HPTLC silica gel mixture. Dry the plate at 105° for 1 h before use.

Application volume: 10 µL

Developing solvent system: Toluene, dehydrated alcohol, and ammonium hydroxide (50:45:5)

Analysis: Proceed as directed, using the *Developing solvent system*. After removal of the plate, mark the solvent front, and allow the plate to air-dry. Heat the plate at 105° until the odor of ammonia disappears (about 5 min). Allow the plate to cool, and examine under UV light at 254 nm. [NOTE—The R_F values for fexofenadine and pseudoephedrine are 0.17 and 0.39, respectively.]

Acceptance criteria: The R_F value of fexofenadine hydrochloride in the *Sample solution* is comparable to that of fexofenadine hydrochloride in *Standard solution A*. The R_F value of pseudoephedrine hydrochloride in the *Sample solution* is comparable to that of pseudoephedrine hydrochloride in *Standard solution B*.

- **PROCEDURE 1**

Buffer: Dissolve 6.8 g of sodium acetate and 16.22 g of sodium 1-octanesulfonate in water, and dilute with water to 1 L. Adjust with glacial acetic acid to a pH of 4.6.

Mobile phase: Methanol and *Buffer* (13:7)

Diluent: Methanol and *Buffer* (3:2)

System suitability solution: Transfer 40 mg of USP Pseudoephedrine Hydrochloride RS to a 50-mL volumetric flask. Add 5 mL of *tert*-butylhydroperoxide solution, and sonicate. Cover the flask opening with aluminum foil, and place the flask in an oven at 90° for 60 min. Remove from the oven, and allow to cool. Add 35 mL of *Mobile phase*, and cool to room temperature. Dilute with *Mobile phase* to volume. The degradation of pseudoephedrine hydrochloride by this process produces the related compound ephedrone.

Related compounds stock solution: Dissolve quantities of USP Fexofenadine Related Compound A RS and decarboxylated degradant[1] in a volume of methanol, and dilute with *Buffer* to obtain a ratio of methanol to *Buffer* of 3:2. Dilute with *Diluent* to obtain a solution having concentrations of 0.2 mg/mL for each component.

Related compounds solution: 0.02 mg/mL each of USP Fexofenadine Related Compound A RS and decarboxylated degradant from *Related compounds stock solution* diluted with *Mobile phase*

Standard stock solution: 0.4 mg/mL of fexofenadine hydrochloride and 0.8 mg/mL of pseudoephedrine hydrochloride from USP Fexofenadine Hydrochloride RS and USP Pseudoephedrine Hydrochloride RS, respectively, in *Mobile phase*

Standard solution: Dilute 6.0 mL of the *Standard stock solution* and 15.0 mL of the *Related compounds solution* with *Mobile phase* to 50 mL to obtain a solution having known concentrations of 0.096 mg/mL of pseudoephedrine hydrochloride, 0.048 mg/mL of fexofenadine hydrochloride, 0.006 mg/mL of fexofenadine related compound A, and 0.006 mg/mL of decarboxylated degradant.

Sample stock solution: Nominally equivalent to 1.2 mg/mL of fexofenadine hydrochloride and 2.4 mg/mL of pseudoephedrine hydrochloride. To prepare, transfer NLT 10 whole Tablets to a 500-mL volumetric flask. Add 300 mL of methanol, and shake by mechanical means at high speed for 60 min. Sonicate the flask for 60 min at 40°. Add 150 mL of *Buffer*, and sonicate for 60 min at 40°. Vent the flask, and vigorously shake the flask by hand at 15-min intervals during the mechanical shaking and sonication steps. Cool to room temperature, and dilute with *Buffer* to volume to obtain a final concentration. Pass a portion of this solution through a filter of 0.45-µm or finer pore size, and use the filtrate.

Sample solution: 0.048 mg/mL and 0.096 mg/mL of fexofenadine hydrochloride and pseudoephedrine hydrochloride, respectively, from the *Sample stock solution* diluted with *Mobile phase*. [NOTE—Alternatively, centrifuge the *Sample stock solution*, and use the supernatant to prepare the *Sample solution*. Filter the *Sample solution* before analysis.]
